

Fixed Pricing Solution

While it is never certain if rates will rise or fall, historical trends, along with other market indicators can signal future prices with a high degree of probability. The Freedom Plan is intended to offset potential risk that may be incurred by volatility in energy markets.

By applying a fixed price strategy, businesses are provided the ability to secure a set kWh price for the duration of an electricity supply contract (which means the price you secure is the price you pay, even if market rates fluctuate.) It is a simple, stable solution for businesses seeking cost stability and budget certainty.

Key Points

- Cost Stability
- Budget Certainty
- Simplicity
- Terms from 3 to 60 months

Freedom Plan vs. Utility/Supplier
