

As of 3/31/17

30 Day Average - Day Ahead LMP (per KWh)

One of the best ways to predict the future is to understand the past, which is why we provide comprehensive historical electricity pricing data. With this data, you can spot trends that will help you make more informed commercial energy decisions.

Locational Marginal Pricing (LMP) is a pricing method used to establish the price for energy purchases and sales at specific locations throughout the wholesale electricity markets. The numbers used below are 30 day averages across all nodes and load zones. **These numbers do not take in account load shape or time of use, therefore they do not necessarily reflect the amount paid on a clients bill. These numbers should only be used to help spot trends in the market.**

	CT	ME	MA (NEMA)	MA (SEMA)	MA (WCMA)	RI	NH	PJM (All Zones)	NYISO (All Zones)
30 Day Average - <u>Current</u>	\$0.0360	\$0.0345	\$0.0356	\$0.0356	\$0.0359	\$0.0355	\$0.0353	\$0.0317	\$0.0302
30 Day Average - <u>Month Ago</u>	\$0.0289	\$0.0283	\$0.0292	\$0.0289	\$0.0290	\$0.0288	\$0.0289	\$0.0262	\$0.0271
30 Day Average - <u>Year Ago</u>	\$0.0206	\$0.0203	\$0.0207	\$0.0207	\$0.0207	\$0.0205	\$0.0207	\$0.0239	\$0.0172
% Change - from <u>Month Ago</u>	25%	22%	22%	23%	24%	23%	22%	21%	11%
% Change - from <u>Year Ago</u>	75%	70%	72%	71%	73%	73%	71%	32%	76%
